Knowledge

- Microsoft Power BI
- Power Automate
- UIPATH
- UNIX
- DAX
- .NET
- VBA
- Python
- SQL in MYSQL
- SQL in Postgres
- HTML
- CSS
- JavaScript
- GitHub

WORK EXPERIENCE

Clerk Accounting 2 – The Church of Jesus-Christ

Jan 2023 – February 2024

As a Clerk Accounting 2 in the South America South Area, I spearheaded efforts to streamline and enhance treasury operations. My role involved automating financial report processes, developing applications for error prevention, and creating macros and bots for efficient process automation. Additionally, I conducted in-depth data analysis to inform strategic decision-making and designed Power BI dashboards for user-friendly access to financial information. I am proficient in various tools and languages, including Power BI, VBA, Python, JavaScript, and low-code software such as Power Automate.

RPA Associate – PricewaterhouseCoopers SRL

NOV 2021 – JAN 2023

In my role as an RPA Developer, I worked developing in different programming languages, such as JavaScript, VB, Python, and Google Apps Script, in order to automate processes. These processes range from low-complexity developments (macros in VB) to high-complexity developments such as bots in JavaScript, VB, Python, and Google Apps Script, which perform interactions on the web or on different platforms as requested by the client. I also performed data analysis and visualization through Power BI, based on the ETL method.

Education

Data Science BS – Brigham Young University Idaho *since 2021*

I've developed a strong background in programming and web development. Skilled in functional and object-oriented programming (CSE 110, CSE 210), and proficient in JavaScript for interactive interfaces (CSE 121B). Experienced in frontend development (WDD 230) and database management (ITM 111). Additional skills include foundational programming and web development (CSEPC 110, WDD 110). Capable in data analysis and visualization.
